Trading Volatility-Colin Bennett 2014-08-17 This publication aims to fill the void between books providing an introduction to derivatives, and advanced books whose target audience are members of quantitative modelling community. In order to appeal to the widest audience, this publication tries to assume the least amount of prior knowledge. The content quickly moves onto more advanced subjects in order to concentrate on more practical and advanced topics. "A master piece to learn in a nutshell all the essentials about volatility with a practical and lively approach. A must read!" Carole Bernard, Equity Derivatives Specialist at Bloomberg "This book could be seen as the 'volatility bible'!" Therapeutic Immunosuppression-Angus W. Thomson 2001 This work has broad applications in clinical medicine, ranging from prevention and treatment of organ and bone marrow transplant rejection, management of various autoimmune disorders (for example, rheumatoid arthritis), skin disease and asthma. Whereas traditionally only a small repertoire of immunosuppressive agents was available for clinical use, recent discoveries have significantly increased the number of approved agents, resulting in numerous trials to further evaluate their potential. There is also considerable interest in the potential of cell-based therapies (particularly hematopoietic stem and dendritic cell therapy) of allo- and autoimmunity. Important recent advances in the immunotherapy of allergic diseases are also covered in this book. This volume is intended both for practising physicians and surgeons and for biomedical scientists at the graduate/postdoctoral levels, and is designed to provide the theory behind these various approaches to immunosuppression, and to provide state-of-the-art reviews of current developments in each area.

Neighbourhood Effects Research: New Perspectives-Maarten van Ham 2011-11-22 Over the last 25 years a vast body of literature has been published on neighbourhood effects: the idea that living in more deprived neighbourhoods has a negative effect on residents' life chances over and above the effect of their individual characteristics. The volume of work not only reflects academic and policy interest in this topic, but also the fact that we are still no closer to answering the question of how important neighbourhood effects actually are. There is little doubt that these effects exist, but we do not know enough about the causal mechanisms which produce them, their relative importance in shaping individual's life chances, the circumstances or conditions under which they are most important, or the most effective policy responses. Collectively, the chapters in this book offer new perspectives on these questions, and refocus the academic debate on neighbourhood effects. The book enriches the neighbourhood effects literature with insights from a wide range of disciplines and countries.

Nutrition During Pregnancy and Lactation-Leanne M. Redman 2020-01-03 Pregnancy is viewed as a window to future health. With the birth of the developmental origins of human adult disease hypothesis, research and clinical practice has turned its attention to the influence of maternal factors such as health and lifestyle surrounding pregnancy as a means to understand and prevent the inter-generational inheritance of chronic disease susceptibility. Outcomes during pregnancy have long-lasting impacts on both women and children. Moreover, nutrition early in life can influence growth and the establishment of lifelong eating habits and behaviors. This Special Issue on "Nutrition during Pregnancy and Lactation: Implications for Maternal and Infant Health" is intended to highlight new epidemiological, mechanistic and interventional studies that investigate maternal nutrition around the pregnancy period on maternal and infant outcomes. Submissions may include original research, narrative reviews, and systematic reviews and meta-analyses.

Molecular Water Oxidation Catalysis-Antoni Llobet 2014-04-14 Photocatalytic water splitting is a promising strategy for capturing energy from the sun by coupling light harvesting and the oxidation of water, in order to create clean hydrogen fuel. Thus a deep knowledge of the water oxidation catalysis field is essential to be able to come up with useful energy conversion devices based on sunlight and water splitting. Molecular Water Oxidation Catalysis: A Key Topic for New Sustainable Energy Conversion Schemes presents a comprehensive and state-of-the-art overview of water oxidation catalysis in homogeneous phase, describing in detail the most important catalysts discovered today based on first and second row transition metals. A strong emphasis is placed on the description of their performance, as well as how they work from a mechanistic perspective. In addition, a theoretical description of some of the most relevant catalysts based on DFT are presented, as well as a description of related natural systems, such as the oxygen evolving system of photosystem II and the heme chlorite-dismutase. This book is a valuable resource for researchers working on water oxidation catalysis, solar energy conversion and artificial photosynthesis, as well as for chemists and materials scientists with a broad interest in new sustainable energy conversion schemes.

Fluidized Bed Boilers-Prabir Basu 2013-10-22 Fluidized Bed Boilers: Design and Application attempts to address the need for a single source of information covering all major areas of fluidized bed boiler design and operation. It is based on the International Workshop on Design and Operation of Atmospheric Pressure Fluidized Bed Boilers, organized by the Center for Energy Studies, Technical University of Nova Scotia in Halifax on 24-45 June 1983. The volume begins by presenting a simplified approach to the design of a fluidized bed boiler and an overview of problems in fluidized-bed combustion (FBC). These are followed by separate chapters on the equations and concepts needed to estimate key hydrodynamic parameters; the key factors and terms to be considered in selecting FBC for specific applications; and principles in the design of air distributors for a fluidized bed boiler. Subsequent chapters discuss heat transfer to surfaces in fluidized beds; the pollution control of fluidized bed combustion of solid fuels; and materials selection in atmospheric fluidized bed combustion systems. The final two chapters are devoted to applications. These include the operational and performance results of TVA's 20-MW Atmospheric Fluidized Bed Combustion (AFBC) Pilot Plant in Kentucky; and the performance of Canada's first commercial FBC boiler plant, located at CFB Summerside, PEI.

New Perspectives on Music and Gesture-Elaine King 2016-04-29 Building on the insights of the first volume on Music and Gesture (Gritten and King, Ashgate 2006), the rationale for this sequel volume is twofold: first, to clarify the way in which the subject is continuing to take shape by highlighting both central and developing trends, as well as popular and less frequent areas of investigation; second, to provide alternative and complementary insights into the particular areas of the subject articulated in the first volume. The thirteen chapters are structured in a broad narrative trajectory moving from theory to practice, embracing Western and non-Western practices, real and virtual gestures, live and recorded performances, physical and acoustic gestures, visual and auditory perception, among other themes of topical interest. The main areas of enquiry include psychobiology; perception and cognition; philosophy and semiotics; conducting; ensemble work and solo piano playing. The volume is intended to promote and stimulate further research in Musical Gesture Studies.

Social Media and Civic Engagement-Scott P. Robertson 2018-05-24 Social media platforms are the latest manifestation in a series of sociotechnical innovations designed to enhance civic engagement, political participation, and global activism. While many researchers started out as optimists about the promise of social media for broadening participation and enhancing civic engagement, recent events have tempered that optimism. As this book goes to press, Facebook is fighting a battle over the massive disclosure of user information during the 2016 U.S. presidential campaign, social analytics company Cambridge Analytica is being revealed as a major player in micro profiling voters in that same election, bots and fake news factories are undermining democratic discourse via social media worldwide, and the president of the United States is unnerving the world as a stream-of-consciousness Twitter user. This book is a foundational review of current research on social media and civic engagement organized in terms of history, theory, practice, and challenges. History reviews how researchers and developers have continuously pushed the envelope to explore technology enhancements for political and social discourse. Theory reveals that the use of globally-networked social technologies touches many fields including political science, sociology, psychology, media studies, network science, and more. Practice is examined through studies of political engagement both in democratic situations and in confrontational situations. Challenges are identified in order to find ways forward. For better or worse, social media for civic engagement has come of age. Citizens, politicians, and activists are utilizing social media in innovative ways, while bad actors are discovering possibilities for spreading dissension and undermining trust. We are at a sobering inflection point, and this book is your foundation for understanding how we got here and where we are going.

American Kinship-David M. Schneider 2014-06-01 American Kinship is the first attempt to deal systematically with kinship as a system of symbols and meanings, and not simply as a network of functionally interrelated familial roles. Schneider argues that the study of a highly differentiated society such as our own may be more revealing of the nature of kinship than the study of anthropologically more familiar, but less differentiated societies. He goes to the heart of the ideology of relations among relatives in America by locating the underlying features of the definition of kinship—nature vs. law, substance vs. code. One of the most significant features of American Kinship, then, is the explicit development of a theory of culture on which the analysis is based, a theory that has since proved valuable in the analysis of other cultures. For this Phoenix edition, Schneider has written a substantial new chapter, responding to his critics and recounting the charges in his thought since the book was first published in 1968.

Cell Volume Regulation-Florian Lang 1998 This volume presents a unique compilation of reviews on cell volume regulation in health and disease, with contributions from leading experts in the field. The topics covered include mechanisms and signaling of cell volume regulation and the effect of cell volume on cell function, with special emphasis on ion channels and transporters, kinases and gene expression. Several chapters elaborate on how cell volume regulatory mechanisms participate in the regulation of epithelial transport, urinary concentration, metabolism, migration, cell proliferation and apoptosis. Last but not least, this publication is an excellent guide to the role of cell volume in the pathophysiology of hypercatabolism, diabetes mellitus, brain edema, hemoglobinopathies, tumor growth and metastasis, to name just a few. Providing deeper insights into an exciting area of research which is also of clinical relevance, this publication is a valuable addition to the library of those interested in cell volume regulation.

Shadows on the Wall-Keith B. Payne 2020 "Shadows on the Wall: Deterrence and Disarmament examines and contrasts the three alternative philosophical positions about the nature of the international system and patterns of human behavior that underlie three competing narratives seen in U.S. public debate regarding nuclear deterrence and disarmament. For over six decades, these three competing narratives, built on contrary philosophical traditions, have been the basis for contending positions regarding U.S. nuclear policy-ranging from advocacy for complete global nuclear disarmament to advocacy for the maintenance of robust U.S. nuclear capabilities for deterrence. Each of these three different narratives is based on different speculative expectations about developments in the international system and future patterns of human behavior. Given the inherent uncertainties about future developments in the international system and human behavior, none of these narratives can be deemed to objectively correct, or certainly wrong. They may, nevertheless, be judged to entail different levels of prudence for U.S. and allied security"--
