New Insights into Parvovirus Research-Giorgio Gallinella 2020-04-15 Viruses in the Parvoviridae family constitute one of the most diverse and intriguing fields of research. While they all share an ssDNA genome and a small capsid, they can differ widely in structure, genome organization and expression, virus-cell interaction, and impact on the host. Exploring such diversity and unraveling the inherent complexity in these apparently simple viruses is an ongoing endeavor and commitment for the scientific community. The translational implications of research on parvoviruses are relevant. Within the family, some viruses are important human and veterinary pathogens, in need of diagnostic methods and antiviral strategies; other viruses have long been studied and engineered as tools for oncolytic therapy, or as sophisticated gene delivery vectors, and can now display their wide and expanding applicative potential. This Special Issue of Viruses collects recent contributions in the field of parvovirus research, with a focus on new insights and research on unresolved issues, as well as new approaches exploiting systemic methodologies. Evolution, structural biology, viral replication, virus-host interaction, pathogenesis and

immunity, and viral oncotherapy are a selection of the topics addressed in the issue that can be of relevance to the community involved in parvovirus research and of interest to a wider audience.

The German Campaign in Poland (1939)-Robert M. Kennedy 2015-04-13 Merriam Press World War 2 History Series. Historical Study German Report Series, Dept. of the Army Pamphlet No. 20-255. The German attack on Poland precipitated World War II, making the Polish campaign one of particular significance to the student of the 1939-45 conflict. The lessons learned by the German Army in its operations in Poland were put to use in the later campaigns against the western Allies, the Balkan states, and the Soviet Union. Poland also formed the testing ground for new theories on the use of armored forces and close air support of ground troops. The purpose of this campaign study was to provide the U.S. Army with a factual account of German military operations against Poland, based on source material from captured records then in the custody of The Adjutant General, Dept. of the Army; monographs prepared by a number of former German officers for the Historical Division, U.S. Army, Europe; and such Polish accounts as were available. 20 photos, 10 maps, 4 charts.

People and Computers XIV – Usability or Else!-Sharon McDonald 2012-12-06 Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing. The Web is merging with a variety of technologies: cell phones, laptop computers, hand held organisers, information appliances, and GPS and other sensors. The capability for access anytime and anywhere is here. The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access. Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices. We have proposed a general technique that promises to assist in mediating access. It capitalises on advantages afforded by computation(Hollan & Stometta, 1992). We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues, which at first may seem unrelated but in fact have much in common, arise in other contexts. One such activity, gaining immediate access, is currently of growing importance because of expanding connectivity via wireless technology. Cell phones and related technologies make it possible to be constantly available for synchronous interaction. At times, this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users.

The Grape Genome-Dario Cantu 2019-11-13 This book describes the current state of

international grape genomics, with a focus on the latest findings, tools and strategies employed in genome sequencing and analysis, and genetic mapping of important agronomic traits. It also discusses how these are having a direct impact on outcomes for grape breeders and the international grape research community. While *V. vinifera* is a model species, it is not always appreciated that its cultivation usually requires the use of other *Vitis* species as rootstocks. The book discusses genetic diversity within the *Vitis* genus, the available genetic resources for breeding, and the available genomic resources for other *Vitis* species. Grapes (*Vitis vinifera* spp. *vinifera*) have been a source of food and wine since their domestication from their wild progenitor (*Vitis vinifera* ssp. *sylvestris*) around 8,000 years ago, and they are now the world's most valuable horticultural crop. In addition to being economically important, *V. vinifera* is also a model organism for the study of perennial fruit crops for two reasons: Firstly, its ability to be transformed and micropropagated via somatic embryogenesis, and secondly its relatively small genome size of 500 Mb. The economic importance of grapes made *V. vinifera* an obvious early candidate for genomic sequencing, and accordingly, two draft genomes were reported in 2007. Remarkably, these were the first genomes of any fruiting crop to be sequenced and only the fourth for flowering plants. Although riddled with gaps and potentially omitting large regions of repetitive sequences, the two genomes have provided valuable insights into grape genomes. Cited in over 2,000 articles, the genome has served as a reference in more than 3,000 genome-wide transcriptional analyses. Further, recent advances in DNA sequencing and bioinformatics

are enabling the assembly of reference-grade genome references for more grape genotypes revealing the exceptional extent of structural variation in the species.

Ecology and Recovery of Eastern Old-Growth Forests-Andrew M. Barton 2018-11-08
The landscapes of North America, including eastern forests, have been shaped by humans for millennia, through fire, agriculture, hunting, and other means. But the arrival of Europeans on America's eastern shores several centuries ago ushered in the rapid conversion of forests and woodlands to other land uses. By the twentieth century, it appeared that old-growth forests in the eastern United States were gone, replaced by cities, farms, transportation networks, and second-growth forests. Since that time, however, numerous remnants of eastern old growth have been discovered, meticulously mapped, and studied. Many of these ancient stands retain surprisingly robust complexity and vigor, and forest ecologists are eager to develop strategies for their restoration and for nurturing additional stands of old growth that will foster biological diversity, reduce impacts of climate change, and serve as benchmarks for how natural systems operate. Forest ecologists William Keeton and Andrew Barton bring together a volume that breaks new ground in our understanding of ecological systems and their importance for forest resilience in an age of rapid environmental change. This edited volume covers a broad geographic canvas, from eastern Canada and the Upper Great Lakes states to the deep South. It looks

at a wide diversity of ecosystems, including spruce-fir, northern deciduous, southern Appalachian deciduous, southern swamp hardwoods, and longleaf pine. Chapters authored by leading old-growth experts examine topics of contemporary forest ecology including forest structure and dynamics, below-ground soil processes, biological diversity, differences between historical and modern forests, carbon and climate change mitigation, management of old growth, and more. This thoughtful treatise broadly communicates important new discoveries to scientists, land managers, and students and breathes fresh life into the hope for sensible, effective management of old-growth stands in eastern forests.

Universal Access. Theoretical Perspectives, Practice, and Experience-Noelle

Carbonell 2003-07-01 This book constitutes the thoroughly refereed post-proceedings of the 7th ERCIM Workshop on User Interfaces for All, held in Paris, France, in October 2002. The 40 revised full papers presented were carefully reviewed and selected during two rounds of refereeing and revision. The papers are organized in topical sections on user interfaces for all: accessibility issues, user interfaces for all: design and assessment, towards an information society for all, novel interaction paradigms: new modalities and dialogue style, novel interaction paradigms: accessibility issues, and mobile computing: design and evaluation.

Nazi Conspiracy and Aggression-

Environmental Health Impacts of Transport and Mobility-P. Nicolopoulou-Stamati 2006-02-21 The health effects of society's mobility and transport are addressed with a global perspective, including such topics as the effects of air pollution, noise, and sedentarism.

Greater Sage-Grouse-Steven T. Knick 2011-05-19 "A Publication of the Cooper Ornithological Society."

Freezing Physics-Dirk van Delft 2007 In 1908, Heike Kamerlingh Onnes (1853-1926) liquefied helium for the first time, briefly rendering his Dutch laboratory "the coldest place on earth." Freezing Physics is the first book to tell the story of Leiden University's famed cryogenics laboratory and the man behind it, whose scientific accomplishments earned him the Nobel Prize for Physics. This fascinating portrayal of Kamerlingh Onnes traces his storied career from his first experiments with helium to his later work that opened up unexplored territories of extreme cold, magnetism, and thermodynamics—and cleared the

path for the eventual discovery of superconductivity in 1911. Dirk van Delft here illuminates the scientific acuity, managerial talent, and visionary character that equipped Kamerlingh Onnes to almost single-handedly change the course of the history of physics.

The History of the Wass de Czege Family-András W. Kovács 2005

The Wages of Destruction-Adam Tooze 2008-02-26 An extraordinary mythology has grown up around the Third Reich that hovers over political and moral debate even today. Adam Tooze's controversial new book challenges the conventional economic interpretations of that period to explore how Hitler's surprisingly prescient vision- ultimately hindered by Germany's limited resources and his own racial ideology-was to create a German super-state to dominate Europe and compete with what he saw as America's overwhelming power in a soon-to- be globalized world. The Wages of Destruction is a chilling work of originality and tremendous scholarship that is already setting off debate in Germany and will fundamentally change the way in which history views the Second World War.

The Back Book-Martin Roland 2002 This is the second edition of the booklet which

contains practical advice on how to deal with back problems and stay active. It is based on the latest research and the information has been shown to be effective in clinical trials. It is suitable for anyone suffering back pain, and doctors or therapists can use it to help patients cope with early management of symptoms. It is linked with the Royal College of General Practitioners and the Faculty of Occupational Medicine guidelines for coping with back pain. The publication is also available in packs of 10 copies (ISBN 0117029505), as well as a video based on the booklet (Get back active, ISBN 0117029408).

The Grand Strategy of the Russian Empire, 1650-1831-John P. LeDonne 2004 At its height, the Russian empire covered eleven time zones and stretched from Scandinavia to the Pacific Ocean. Arguing against the traditional historical view that Russia, surrounded and threatened by enemies, was always on the defensive, John P. LeDonne contends that Russia developed a long-term strategy not in response to immediate threats but in line with its own expansionist urges to control the Eurasian Heartland. LeDonne narrates how the government from Moscow and Petersburg expanded the empire by deploying its army as well as by extending its patronage to frontier societies in return for their serving the interests of the empire. He considers three theaters on which the Russians expanded: the Western (Baltic, Germany, Poland); the Southern (Ottoman and Persian Empires); and the Eastern (China, Siberia, Central Asia). In his analysis of military power, he weighs the role

of geography and locale, as well as economic issues, in the evolution of a larger imperial strategy. Rather than viewing Russia as peripheral to European Great Power politics, LeDonne makes a powerful case for Russia as an expansionist, militaristic, and authoritarian regime that challenged the great states and empires of its time.

Energy-Efficient Wireless Sensor Networks-Vidushi Sharma 2017-07-28 The advances in low-power electronic devices integrated with wireless communication capabilities are one of recent areas of research in the field of Wireless Sensor Networks (WSNs). One of the major challenges in WSNs is uniform and least energy dissipation while increasing the lifetime of the network. This is the first book that introduces the energy efficient wireless sensor network techniques and protocols. The text covers the theoretical as well as the practical requirements to conduct and trigger new experiments and project ideas. The advanced techniques will help in industrial problem solving for energy-hungry wireless sensor network applications.

High Performance with High Integrity-Ben W. Heineman Jr. 2008-06-03 Our free-market capitalist system is the world's greatest driver of prosperity, but it has a dark side. Under intense pressure to make the numbers, executives and employees face temptation to cut

corners, fudge accounts, or worse. And in today's unforgiving environment, such lapses can be catastrophic. Fines and settlements have amounted to billions of dollars. Careers and companies have imploded. In *High Performance with High Integrity*, Ben Heineman argues that there is only one way for companies to avoid such failures: CEOs must create a culture of integrity through exemplary leadership, transparency, incentives, and processes, not just rules and penalties. Heineman, GE's chief legal officer and a member of both Jack Welch's and Jeff Immelt's senior management teams for nearly twenty years, reveals crucial "performance with integrity" principles and practices that you can begin applying immediately, and shows how you can drive performance by integrating integrity systems and processes deep into company operations. Such principles and practices also create affirmative benefits: inside the corporation, in the marketplace and in society. Concise and insightful, this book provides a much-needed corporate blueprint for doing well while doing good in the high-pressure global economy. From our new Memo to the CEO series-- solutions-focused advice from today's leading practitioners.

Documents of German History-Louis Leo Snyder 1958 Seeks to provide the texts of the more important documents and illustrative material on the general course of German history from its early days to the Bonn Republic. The collection includes the texts of constitutions, treaties, pacts, proclamations, speeches, letters, party programs, laws, court

decisions, narrative descriptions, and many other items important in the historical development of Germany.

Microgrid Technologies-C. Sharmeela 2021-03-10 Microgrid technology is an emerging area, and it has numerous advantages over the conventional power grid. A microgrid is defined as Distributed Energy Resources (DER) and interconnected loads with clearly defined electrical boundaries that act as a single controllable entity concerning the grid. Microgrid technology enables the connection and disconnection of the system from the grid. That is, the microgrid can operate both in grid-connected and islanded modes of operation. Microgrid technologies are an important part of the evolving landscape of energy and power systems. Many aspects of microgrids are discussed in this volume, including, in the early chapters of the book, the various types of energy storage systems, power and energy management for microgrids, power electronics interface for AC & DC microgrids, battery management systems for microgrid applications, power system analysis for microgrids, and many others. The middle section of the book presents the power quality problems in microgrid systems and its mitigations, gives an overview of various power quality problems and its solutions, describes the PSO algorithm based UPQC controller for power quality enhancement, describes the power quality enhancement and grid support through a solar energy conversion system, presents the fuzzy logic-based power quality assessments, and

covers various power quality indices. The final chapters in the book present the recent advancements in the microgrids, applications of Internet of Things (IoT) for microgrids, the application of artificial intelligent techniques, modeling of green energy smart meter for microgrids, communication networks for microgrids, and other aspects of microgrid technologies. Valuable as a learning tool for beginners in this area as well as a daily reference for engineers and scientists working in the area of microgrids, this is a must-have for any library.

Computer Security - ESORICS 2019-Kazue Sako 2019-09-15 The two volume set, LNCS 11735 and 11736, constitutes the proceedings of the 24th European Symposium on Research in Computer Security, ESORIC 2019, held in Luxembourg, in September 2019. The total of 67 full papers included in these proceedings was carefully reviewed and selected from 344 submissions. The papers were organized in topical sections named as follows: Part I: machine learning; information leakage; signatures and re-encryption; side channels; formal modelling and verification; attacks; secure protocols; useful tools; blockchain and smart contracts. Part II: software security; cryptographic protocols; security models; searchable encryption; privacy; key exchange protocols; and web security.

Disinfection By-products in Drinking Water-M.N.V. Prasad 2020-02-18 Disinfection Byproducts in Drinking Water: Detection and Treatment presents cutting-edge research on how to understand the procedures, processes and considerations for detecting and treating disinfection by-products from drinking water, swimming pool water, and wastewater. The book begins with an overview of the different groups of Disinfection Byproducts (DBPs), such as: Trihalomethanes (THM), Halo acetic acids, and Haloacetonitrile (HAN). This coverage is quickly followed by a clear and rigorous exposition of the latest methods and technologies for the characterization, occurrence, formation, transformation and removal of DBPs in drinking water. Other chapters focus on ultraviolet-visible spectroscopy, electron spin resonance, and gas chromatography-mass spectrometry. Researchers will find a valuable resource to a breath of topics for DBP detection and treatment, including various recent techniques, such as microfiltration, nanofiltration membrane and nanotechnology. Explains the latest research in detection, treatment processes and remediation technologies Includes sampling, analytical and characterization methods and approaches Covers cutting-edge research, including membrane based technologies, nanotechnology treatment technologies and bioremediation treatment technologies Provides background information regarding contamination sources

The Heartsong of Charging Elk-James Welch 2000 Charging Elk, an Oglala Sioux, is

recruited by Buffalo Bill Cody to join his Wild West show, which creates a sensation in Europe, until he is left behind--because of illness and a bureaucratic mix-up--in the unfamiliar world of Marseilles.

Current Practice in Forensic Medicine-John A. M. Gall 2016-08-16 Forensic medicine is a broad and evolving field with areas of rapid progress embracing both clinical and pathological aspects of practice, in which there may be considerable overlap. This is the second volume in a series that provides a unique, in-depth and critical update on selected topics of direct relevance to those practising in the field of clinical forensic medicine and related areas including lawyers, police, medical practitioners, forensic scientists, and students. The chapters endeavour to maintain a relevance to an international, multi-professional audience and include chapters on: DNA decontamination, The toxicity of novel psychoactive substances, The relevance of gastric contents in the timing of death, The effects of controlled energy devices, The main risk factors for driving impairment, The risk factors for harm to health of detainees in short-term custody, Autoerotic deaths, Child maltreatment and neglect, and The investigation of potential non-accidental head injury in children. Also included are chapters on excited delirium syndrome, automatism and personality disorders. Two topics not generally covered in standard clinical forensic medical textbooks include a forensic anthropological approach to body recovery in potential crimes

against humanity and risk management and security issues for the forensic practitioner investigating potential crimes against humanity in a foreign country.

Cetacean Societies-Janet Mann 2000-06 "Part review, part testament to extraordinary dedication, and part call to get involved, *Cetacean Societies* highlights the achievements of behavioral ecologists inspired by the challenges of cetaceans and committed to the exploration of a new world."—from the preface by Richard Wrangham Long-lived, slow to reproduce, and often hidden beneath the water's surface, whales and dolphins (cetaceans) have remained elusive subjects for scientific study even though they have fascinated humans for centuries. Until recently, much of what we knew about cetaceans came from commercial sources such as whalers and trainers for dolphin acts. Innovative research methods and persistent efforts, however, have begun to penetrate the depths to reveal tantalizing glimpses of the lives of these mammals in their natural habitats. *Cetacean Societies* presents the first comprehensive synthesis and review of these new studies. Groups of chapters focus on the history of cetacean behavioral research and methodology; state-of-the-art reviews of information on four of the most-studied species: bottlenose dolphins, killer whales, sperm whales, and humpback whales; and summaries of major topics, including group living, male and female reproductive strategies, communication, and conservation drawn from comparative research on a wide range of species. Written by some

of the world's leading cetacean scientists, this landmark volume will benefit not just students of cetology but also researchers in other areas of behavioral and conservation ecology as well as anyone with a serious interest in the world of whales and dolphins. Contributors are Robin Baird, Phillip Clapham, Jenny Christal, Richard Connor, Janet Mann, Andrew Read, Randall Reeves, Amy Samuels, Peter Tyack, Linda Weilgart, Hal Whitehead, Randall S. Wells, and Richard Wrangham.

LEED Reference Guide for Building Design and Construction-US Green Building Council 2016-07-01

Bradshaw's illustrated hand-book to Switzerland and the Tyrol-George Bradshaw 1857

The Forger's Spell-Edward Dolnick 2008-06-24 Profiles the dramatic art hoax through which a small-time Dutch painter conned a reviled Nazi leader by creating works that impersonated those of famed artist Jan Vermeer, a seven-year deception during which the forger hid his mediocre artistic abilities through psychologically manipulative practices.

30,000 first printing.

Mrs. Lunch- 2004-10 Help children build their vocabulary with Joy Readers, a set of 80 lively, leveled titles covering a broad range of topics and cultures. Individual and group lesson plans highlight strategies for reading instruction, and additional activities help ELL students master reading.

Animal Behavior for Shelter Veterinarians and Staff-Emily Weiss 2015-07-07 Animal Behavior for Shelter Veterinarians and Staff presents and evaluates the available research and programs that address both animal and human behaviors associated with the intake, management and rehoming of dog and cats. Introductions to dog and cat behavior relevant to any animal professional Reviews behavioral reasons for the relinquishment of dogs and cats Describes intake and assessment protocol, shelter design, training and enrichment programs that reduce stress and enhance behavioral well-being Concepts to improve the adoption process and support the human-animal bond post-adoption

Integrated Coastal Zone Management-Erlend Moksness 2009-07-31 Coastal waters

around the globe suffer from strain due to a widerange of human activities. The situation calls for a holisticapproach, combining expertise from nature and social science, toreach a balanced and sustainable development of the coastal zone. This important book comprises the proceedings of TheInternational Symposium on Integrated Coastal Zone Management,which took place in Arendal, Norway between 11-14 June 2007. The main objective of the Symposium was to present currentknowledge and to address issues on advice and management related tothe coastal zone. The major themes of papers included in this bookare: Coastal habitats Impacts on coastal systems Integrated Coastal Zone Management Coastal governance Comprising a huge wealth of information, this timely and welledited volume is essential reading for all those involved incoastal zone management around the globe. All libraries in researchestablishments and universities where fisheries and aquaticsiences are studied and taught will need copies of this importantvolume on their shelves.

Techniques for Pollination Biologists-Carol Ann Kearns 1993 Presents a full range of techniques--the newest and most sophisticated as well as the simple, inexpensive, and traditional ones--compiled from the published literature and from the unpublished notebooks and files of pollination biologists. Examines pitfalls and offers cautionary advice about design and implementation of various types of pollination experiments. An important

compilation in a discipline fed by a variety of fields and heretofore lacking a single source "how-to" reference. Paper edition (unseen), \$17.50. Annotation copyright by Book News, Inc., Portland, OR

Multinational Companies from Emerging Economies-A. Goldstein 2007-04-17 This comprehensive study of the rise of multinational corporations from emerging economies explores the basis of their success. Andrea Goldstein argues that the history of multinational business offers valuable lessons for the present and shows how emerging multinationals are embedded in dense political, social and ethnic networks.

Paper-Son Poet-Koon Woon 2016-08-14 A very unusual memoir by a truly-lived poet coming from the ancient, timeless villages of China to the space and cyber age. The poet Koon Woon overcame language and cultural barriers to become an award-winning international poet. In the process of self-overcoming, Woon battled life-long mental illness and homelessness to become a world cultural ambassador. These experiences are too incredible and even more difficult to believe that a chrysanthemum can bloom in the inner city during the bitter month of October. It is a must read for students of literature and the clinical psychologist. Woon is the winner of a Pen Oakland Award and The American Book

Award.

The Soviet High Command-John Erickson 2001 This study documents the history of the Workers-Peasants Red Army from its origins in the post-revolutionary Civil War to the battle for Moscow in December 1941. Drawing from Soviet military histories, specialist monographs, Red Army publications, memoirs, and documentary collections on Soviet military organization and Army-Party relations, Erickson (emeritus, defense studies, U. or Edinburgh) considers such events as the secret collaboration with the Reichswehr, the military build-up in the Far East, the Tukhachevsky affair, Stalinist purges, and the Winter War in Finland. This edition features a new preface by the author. c. Book News Inc.
