IBM Software for SAP Solutions-Yaro Dunchych 2015-09-29 SAP is a market leader in enterprise business application software. SAP solutions provide a rich set of composable application modules, and configurable functional capabilities that are expected from a comprehensive enterprise business application software suite. In most cases, companies that adopt SAP software remain heterogeneous enterprises running both SAP and non-SAP systems to support their business processes. Regardless of the specific scenario, in heterogeneous enterprises most SAP implementations must be integrated with a variety of

non-SAP enterprise systems: Portals Messaging infrastructure Business process management (BPM) tools Enterprise Content Management (ECM) methods and tools Business analytics (BA) and business intelligence (BI) technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP-centric environments. However, the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance. When SAP software is used in a large, heterogeneous enterprise environment, SAP clients face the dilemma of selecting the correct set of tools and platforms to implement SAP functionality, and to integrate the SAP solutions with non-SAP systems. This IBM® Redbooks® publication explains the value of integrating IBM software with SAP solutions. It describes how to enhance and extend pre-built capabilities in SAP software with best-in-class IBM enterprise software, enabling clients to maximize return on investment (ROI) in their SAP investment and achieve a balanced enterprise architecture approach. This book describes IBM Reference Architecture for SAP, a prescriptive blueprint for using IBM software in SAP solutions. The reference architecture is focused on defining the use of IBM software with SAP, and is not intended to address the internal aspects of SAP components. The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy, efficiency, and balance. The majority of the most important architectural domain topics, such as integration, process

optimization, master data management, mobile access, Enterprise Content Management, business intelligence, DevOps, security, systems monitoring, and so on, are covered in the book. However, there are several other architectural domains which are not included in the book. This is not to imply that these other architectural domains are not important or are less important, or that IBM does not offer a solution to address them. It is only reflective of time constraints, available resources, and the complexity of assembling a book on an extremely broad topic. Although more content could have been added, the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains, and it is hoped that this book provides great value to those reading it. This IBM Redbooks publication is targeted to the following audiences: Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large-scale SAP projects. IT architects and consultants integrating IBM technology with SAP solutions.

Smart homes, home automation and ambient-assisted living are terms used to describe technological systems that enrich our living environment and provide means to support

care, facilitate well-being and improve comfort. This handbook provides an overview of the domain from the perspective of health care and technology. In Part 1, we set out to describe the demographic changes in society, including ageing and diseases and impairments which lead to the needs for technological solutions. In Part 2, we describe the technological solutions, ranging from sensor-based networks, components, to communication protocols that are used in the design of smart homes. We also deal with biomedical features which can be measured and services that can be delivered to end-users as well as the use of social robots. In Part 3, we present best practices in the field. These best practices mainly focus on existing projects in Europe, the USA and Asia, in which people receive help through dedicated technological solutions being part of the continuum of the home environment and care.

The Blackberry-Research In Motion 2012-08-07 From its relatively modest debut in 1999, Blackberry has become one of the most popular technological products in the world. Research in Motion - the phenomenally successful company behind Blackberry, which began as a student start-up - has already sold over 75 million smartphones, nearly half of which were sold in the last year alone. This book is a never-before-seen, behind-the-scenes portrait of RIM and its amazing CEOs who are two of today's most respected businessmen: Jim Balsillie and Mike Laziridis. It explores in detail not only the company's early struggles against much larger and much better known firms, but also how RIM has been able to maintain and exceed even its own lofty expectations. With thousands of hours of interviews

with people close to the company, including unprecedented access to company founders Jim Balsillie and Mike Lazaridis (they are writing the foreword), award-winning business writer Rod McQueen has crafted an arresting narrative telling this incredible story.

Backed by billions in venture capital dollars and led by a brash and ambitious founder, Uber promised to revolutionize the way we move people and goods through the world. What followed would become a corporate cautionary tale about the perils of startup culture and a vivid example of how blind worship of startup founders can go wildly wrong.

Shooting in Sh*tty Light-Lindsay Adler 2012-10-04 Sometimes photographers have to shoot in less than ideal lighting situations. Maybe the wedding is mid-day in the middle of a field, or perhaps the event is in a florescent-lit room. These scenarios can be particularly intimidating for beginning photographers who don't know how to handle the many undesirable lighting situations they may encounter. In Shooting in Sh*tty Light, professional

photographers Lindsay Adler and Erik Valind cover the top ten worst lighting situations and provide a variety of solutions for each. They explain which solutions are most practical and why one option might be preferable over another, examining such problems as extremely low lighting when no flash is allowed, strong backlight, and the light on an overcast day. Unlike other books that focus on natural light or lighting in general, this book addresses a very real need of beginning photographers, answering the question, "What do I do when the lighting is terrible?" Lindsay and Erik candidly show you the tools at your disposal, demonstrating the techniques essential to getting the job done with minimal fuss. Shows how to deal with ten of the worst lighting situations, such as harsh midday light, extremely low light, and mixed light. Offers real-life examples and practical solutions for handling poor light, such as identifying natural reflectors, bouncing light off a wall, or utilizing flash gels. Features a fun, conversational style to help you conquer the fear of poor lighting and approach any lighting situation with confidence!

Obama's BlackBerry-Kasper Hauser 2009-06-30 When Obama stated that if elected, he would keep his Blackberry, debate echoed through Washington and among the ranks of the Secret Service. What would it be like to have a president who could Twitter, send text messages, and navigate the web with ease? What would it be like to receive a text message from inside the Oval Office and, most importantly, what would it say? Now, for the first time, We The People are privy to our new leader's epistolary back-and-forths on his wily hand-held device. We're about to discover that his emails (and the replies, from his wife and daughters, Biden, Palen, Rush, Hannity, the new first puppy, and even Bush) are so tuned in to the language of electronic correspondence they come hilariously close to the brink of legibility. This giftable, imagined glimpse into Obama's beloved Blackberry traverses the mundane and momentous contours of the Commander in Chief's life, from security briefings to spam, basketball practice to domestic bliss, and the panic of oops-I-hit-reply-all, to, of course, the trauma of dealing with the First Mother In Law.
