Alas, the two Vikings' encounter with a mysterious witch just before escaping the town over the city's walls have left them without the one thing that made them human: their mortality. While Ulfar heads home to Sweden, hoping to find a safe haven where he can come to grips with his newfound inability to die, Audun travels by foot to the south, searching for answers on the open road. But both men are about to discover that they cannot run from their destiny. King Olav has left the conquered town of Stenvik in the hands of his lieutenant so he can journey north, following the advice of the scheming healer Valgard, to hunt for the source of the Vikings' power. Soon, Ulfar and Audun will realize they have important roles to play in the battle for supremacy between those seeking to spread the gospel of the White Christ and those who keep to the old ways of Odin, Thor, and Loki.

The Philosophy and Mechanical Principles of Osteopathy-Andrew Taylor Still 2015-02-11 The Philosophy and Mechanical Principles of Osteopathy' is one of the landmark works in the field of Osteopathy, written by its founder, Andrew Taylor Still. Still was an American surgeon and physician who turned his attention to developing a system of treatment less invasive than the conventional treatments of his day. He investigated many 19th century practices and was inspired by their relatively tame side-effects. He believed that manipulation of the muscular skeletal system was the key to alleviating many illnesses, and developed his techniques into what he called Osteopathy (Greek roots osteon- for bone and -pathos for suffering). He promoted his system widely and founded the American School of Osteopathy, the world's first osteopathic school, in Missouri. We are republishing this work with a brand new introductory biography of the author.

Images of Blood in American Cinema-Kjetil Rødje 2016-03-09 Through studying images of blood in film from the mid-1950s to the end of the 1960s, this path-breaking book explores how blood as an (audio)visual cinematic element went from predominately operating as a signifier, providing audiences with information about a film's plot and characters, to increasingly operating in terms of affect, potentially evoking visceral and embodied responses in viewers. Using films such as *The Return of Dracula*, *The Tingler*, *Blood Feast*, *Two Thousand Maniacs*, *Color Me Blood Red*, *Bonnie and Clyde*, and *The Wild Bunch*, Rødje takes a novel approach to film history by following one (audio)visual element through an exploration that traverses established standards for film production and reception. This study does not heed distinctions regarding to genres (horror, western, gangster) or models of film production (exploitation, independent, studio productions) but rather maps the operations of cinematic images across marginal as well as more traditionally esteemed cinematic territories. The result is a book that rethinks and reassembles cinematic practices as well as aesthetics, and as such invites new ways to investigate how cinematic images enter relations with other images as well as with audiences.

SHAN HAI JING—A BOOK COVERED WITH BLOOD-Kate Bazilevsky 2014-08-22 In essence, this story is about how a certain person was searching his bookshelf for something to read and in the end found a book, which turned out to be the source, from which it is possible to obtain absolutely any kind of information about absolutely any person. Meaning, information to the smallest particulars and details about what his or her qualities of personality are, how he or she lives, what he or she really wants to achieve, what he or she hides, and much more. And, it does not matter, if the subject is some person, who lived in the distant past or lives in the present or someone, who will live in the future. Since, as it turned out later on, this literary monument is nothing other than the Catalog of human population. In other words, the encyclopedia of *Homo sapiens*; in essence, the same as encyclopedias, reference books for specialists, which contain complete information about representatives of a particular subspecies of animals, plants, etc. Although at some point, the course of this story turned banal: "bad guys" from security services, intelligence services, politics decided to not only use this source of knowledge for their dirty deeds, but also to appropriate it solely for their personal use. And, the way they tried to do this is also banal: by physically destroying the author of discovery of the Catalog of human population and all of his colleagues. However, the ending of this story makes it stand out from the category of ordinary spy stories. At least because the main characters of this story managed to survive not due to favorable concatenation of circumstances or someone's help, but thanks to that knowledge, which they discovered in the ancient text, which turned out to be the Catalog of human population. Of course, such an outcome upset and continues to upset not only the Russian special services, but also all those people in whose way developers of the Catalog of human population got. And, in this civilization, there are countless numbers of such people: from psychologists (who become no longer needed by anyone) to organizers of this civilization themselves. Since from the standpoint of the Catalog of human population—technogenic civilization without a human, which they lovingly built for many centuries, is simply trash, to put it mildly, and beneath all criticism. And, they themselves are also trash. However, regular people, who (thanks to the scientific discovery made by Andrey Davydov) got the source with answers to all of their questions and individual recipes, now no longer need to pay "experts on the human soul" for being shamelessly fooled. Therefore, whoever tries to kill developers of the Catalog of human population in the future must know that it is no longer possible, as they already became part of history of humanity. After all, at the current stage of development, a *Homo sapiens* has only one possibility to continue to live after death, to live through the ages: in the product that he/she created. And, those, who tried and continue to try to kill them, were nobodies and will remain nobodies, who one day will cease to exist without leaving a trace. As for organizers of this "civilization"—maybe instead of trying to find new recipes to destroy "excess billions" and trying to examine human potential using Neanderthal methods, it would be more reasonable not only to find out the recipe of how to make *Homo sapiens* a 100% controllable producer and consumer from the source (which, by the way, seems to have been left to humanity by creators of nature and a human on this planet), but also how to build a civilization without quotes? After all, it only seems to them that they are the main deceivers, while in reality they were fooled, and fooled majorly.

The American Paint Horse-Glynn W. Haynes 1988-08-01 This book is the first comprehensive history of an admirable American breed of horse that has at last come into its own. It is a ready reference for the breeder and a broadly based account for the historian of the equine species. The author searches out the past, describing the origin of painted horses in ancient times, their movement across Europe, their arrival in the Americas, and their acceptance in the 1960s as a distinctive breed. Accompanying his text with many illustrations, the author discusses breed characteristics, bloodlines, and color patterns. He emphasizes the genetic principles involved in breeding authentic Paints. Included are descriptions and charts of markings of the tobiano, the overo, the criulo, the criollo, and-that fascinating occurrence-the Paint cropout.

Physics and Technology of Hyperthermia-S.B. Field 2012-12-06 In the 1960s a firm rationale was developed for using raised temperatures to treat malignant disease and there has been a continuous expansion of the field ever since. However, a major limitation exists in our ability to heat human tumours, especially those sited deep in the body, with a reasonable degree of temperature uniformity. This problem has resulted in engineers and physicists collaborating closely with biologists and clinicians towards the common goal of developing and testing the clinical potential of this exciting treatment modality. The aim of the physicist and engineer is to develop acceptable methods of heating tumour masses in as many sites as possible to therapeutic temperatures avoiding excessive heating of normal structures and, at the same time, obtaining the temperature distribution throughout the heated volume. The problem is magnified by both the theoretical and technical limitations of heating methods and devices. Moreover, the modelling of external deposition of energy in tissue and knowledge of tissue perfusion are ill-defined. To this must be added the conceptual difficulty of defining a thermal dose. The NATO course was designed to provide a basis for the integration of physics and technology relevant to the development of hyperthermia. There were 48 lectures covering the theoretical and practical aspects of system design and assessment, including, as far as possible, all the techniques of current interest and importance in the field.

WHO Guidelines on Drawing Blood-Neelam Dhingra 2010 Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.
