Universals in Comparative Morphology-Jonathan David Bobaljik 2012-10-05 An argument for, and account of linguistic universals in the morphology of comparison, combining empirical breadth and theoretical rigor. This groundbreaking study of the morphology of comparison yields a surprising result: that even in suppletion (the wholesale replacement of one stem by a phonologically unrelated stem, as in good-better-best) there emerge strikingly robust patterns, virtually exceptionless generalizations across languages. Jonathan David Bobaljik describes the systematicity in suppletion, and argues that at least five generalizations are solid contenders for the status of linguistic universals. The major topics discussed include suppletion, comparative and superlative formation, deadjectival verbs, and lexical decomposition. Bobaljik's primary focus is on morphological theory, but his argument also aims to integrate evidence from a variety of subfields into a coherent whole. In the course of his analysis, Bobaljik argues that the assumptions needed bear on choices among theoretical frameworks and that the framework of Distributed Morphology has the right architecture to support the account. In addition to the theoretical implications of the generalizations, Bobaljik suggests that the striking patterns of regularity in what otherwise appears to be the most irregular of linguistic domains provide compelling evidence for Universal Grammar. The book strikes a unique balance between empirical breadth and theoretical detail. The phenomenon that is the main focus of the argument, suppletion in adjectival gradation, is rare enough that Bobaljik is able to present an essentially comprehensive description of the facts; at the same time, it is common enough to offer sufficient variation to explore the question of universals over a significant dataset of more than three hundred languages.

Fire-Stephen J. Pyne 2013-06-01 For over 400 million years, fire has been an integral force on our planet. It can be as innocent as a bonfire or as destructive and lethal as a wildfire. Human history is rife with fires that have leveled cities—the Fire of Moscow in 1812 that destroyed seventy-five percent of the city, the Great Chicago Fire in 1871 that took down 17,000 buildings, and the fire that obliterated San Francisco after the 1906 earthquake are just a few. Fire is a force of nature that can consume everything in its wake, and yet it also has tremendous powers of cleansing and renewal. At the end of the day, we can't live without it. In *Fire*, Stephen J. Pyne offers a concise history of fire and its use by humanity, explaining how fire has been at the core of hunting, foraging, farming, herding, urbanizing, and managing nature reserves. He depicts how it gave humans power in ancient times, which resulted in humanity beginning to reshape the world for its own benefit. He describes how fire was used by aboriginal societies and the ways agricultural societies added control over fuel, but warns that our mastery of the science and art of fire has not given us complete control—fire disasters throughout history have defined cultures, and unexpected fires that begin as the result of other disasters have shocking effects. Pyne traces fire's influence on landscapes, art, science, and even climate, exploring the power a simple spark has over our imaginations. Lavishly illustrated with a host of rare and unexpected images, *Fire* is a sizzling and accessible tale of our relationship with this primal natural force.
