Castle Valley America-Nancy Taniguchi 2004-09 This is American history told through the stories of an atypical, for Utah, region. Castle Valley is roughly conterminous with two counties, Carbon and Emery, which together formed a rural, industrial enclave in a mostly desert environment behind the mountain range that borders Utah's principal corridor of settlement. In Castle Valley, coal mining and the railroad attracted diverse, multiethnic communities and a fair share of historic characters, from Butch Cassidy, who stole its largest payroll, to Mother Jones, who helped organize its workers against its mining companies. Among the last major segments of the state to be settled, it was also a generally poor region that stretched the capabilities of people to scratch a living from a harsh landscape. The people of Castle Valley experienced complex, unusual combinations of both social cohesion and conflict, but they struggled through poverty, labor disputes, major mining disasters, and other challenges to build communities whose stories reflected the historical course of the nation as a whole. In order to convey her subject's both unique and representative qualities, Nancy Taniguchi has written an epic history that is not just local history, but American history written locally. Nancy J. Taniguchi, who lived for thirteen years in Castle Valley and was previously on the faculty of the College of Eastern Utah in Price, is professor of history at California State University, Stanislaus. She is the author of numerous published articles in mining, legal, women's, western, and Utah history and of one book, Necessary Fraud: Progressive Reform and Utah Coal.

Modern Cold Spray-Julio Villafuerte 2015-08-24 This book focuses on the current state of the art of the novel cold spray process. Cold spray is a solid state metal consolidation process, which allows engineers to tailor surface and shape properties by optimizing process parameters, powder characteristics and substrate conditions for a wide variety of applications that are difficult or impossible by other techniques. Readers will benefit from this book's coverage of the commercial evolution of cold spray since the 1980's and will gain a practical understanding of what the technology has to offer.

Cold-Spray Coatings-Pasquale Cavaliere 2017-11-08 This book combines the contributions of experts in the field to describe the behavior of various materials, micromechanisms involved during processing, and the optimization of cold-spray technology. It spans production, characterization, and applications including wear resistance, fatigue, life improvement, thermal barriers, crack repair, and biological applications. Cold spray is an innovative coating technology based on the kinetic energy gained by particles sprayed at very high pressures. While the technique was developed in the 1990s, industrial and scientific interest in this technology has grown vastly in the last ten years. Recently, many interesting applications have been associated with cold-sprayed coatings, including wear resistance, fatigue life improvement, thermal barriers, biological applications, and crack repair. However, many fundamental aspects require clarification and description.

What Fanon Said-Lewis R. Gordon 2015-04-01 Antiracist reason is white while emotion, and thus supposedly unreason, is black. Challenging academic adherence to this notion, Lewis R. Gordon offers a portrait of Martinican-turned-Algerian revolutionary psychiatrist and philosopher Frantz Fanon as an exemplar of "living thought" against forms of reason marked by colonialism and racism. Working from his own translations of the original French texts, Gordon critically engages everything in Fanon from dialectics, ethics, existentialism, and humanism to philosophical anthropology, phenomenology, and political theory as well as psychiatry and psychoanalysis. Gordon takes into account scholars from across the Global South to address controversies around Fanon's writings on gender and sexuality as well as political violence and the social underclass. In doing so, he confronts the replication of a colonial and racist geography of reason, allowing theorists from the Global South to emerge as interlocutors alongside northern ones in a move that exemplifies what, Gordon argues, Fanon represented in his plea to establish newer and healthier human relationships beyond colonial paradigms.

Survival Guns-Mel Tappan 2009-11-01 When he wrote Survival Guns in 1979, Mel Tappan demonstrated that having the right weapons for securing food and providing personal defense is the key to sustaining life on an independent basis, whether or not a catastrophe occurs. This is even more true today. Survival Guns became the standard in its own time and went through several printings. When it finally went out of print, it graduated from a classic to a sought-after collector's item, because the principles and advice in this well-reasoned volume are sound and perennially valuable. Some new guns and some new calibers have become available since this book was first published, but its principles, advice, and value remain unchanged. Having more choices only increases the value of advice on how to choose what is best for you. As used copies of this book became harder and harder to find, Paladin received numerous requests to bring Tappan's classic back into print. We are pleased to make the most well-known survival firearms book ever published available once more to a new generation of concerned citizens facing the same threats Tappan chronicled during his lifetime. Survival Guns remains the definitive book for anyone interested in the practical use of firearms and related weapons for defense, food gathering, and predator and pest control under conditions of long-term, self-sufficient living.

The Praetorian STARShip : the untold story of the Combat Talon- 2001 Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-driven officers as Brenci Uttaro Ferkes Meller and Thigpen the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous environment covertly to execute any number of unconventional warfare missions.

Loud-Tana Douglas 2021-02-03 What goes on tour stays on tour -- unless you're the the first woman roadie in the world At just fifteen, Tana Douglas ran away to the circus that was rock 'n' roll in the 1970s, taking a job with a young and upcoming band called AC/DC. While still a teenager she headed to the UK and later the US to work for a who's who of bands and artists. Life on the road was exhilarating, hard work, occasionally surreal but never dull, particularly when you're the only woman in the road crew and the #metoo movement is still 40 years away. Whether wrangling Iggy Pop across Europe, climbing trusses while seven months pregnant, drinking shots of JD with Bon Scott backstage at Wembley, or donning a tailor-made suit to do lights for Elton at Windsor Castle, Tana did it all. Loud is rock 'n' roll like you've never seen it before, by a woman who not only survived the all-male world on the road but climbed to the top and lived to tell the tale. Spatial Disorientation in Aviation-Fred H. Previc 2004

Bernard A. Schriever-Jacob Neufeld 2012-05-25 When, on June 5, 1998, Falcon Air Force Base, ten miles east of Colorado Springs, Colorado, was renamed in honor of General Bernard A. Schriever, USAF (Ret.), it marked a singular event. Normally, such an honor is bestowed posthumously, but in this case, the renaming ceremony proved the exception. Although World War II had sparked an effusion of scientific and technical developments, among them radar, electronic warfare, jet engines, air-to-air and air-to-ground missiles, and data-processing technology, the two innovations of unprecedented character that had the greatest affect on the Air Force and the world balance of power were nuclear weapons and ballistic missiles. Gen. Henry H. "Hap" Arnold, who led the Army Air Forces in World War II, believed correctly that the Air Forces' future lay in adapting scientific and engineering advances to air warfare. He was determined to continue in peacetime the cooperation between the Air Force, university scientists, and industry that had paid such handsome dividends during the war. One of the men selected to help fashion the technology of the postwar Air Force was a young colonel named Bernard Schriever, who combined some uncommon personal attributes with engineering training and combat experience. Schriever was to become the officer most closely associated with the development of ballistic missiles. Ultimately, he would be responsible for research, development, and acquisition of all new weapons used by the United States Air Force. Recognized as an unusually intelligent man, Bennie Schriever had a strong character and a precise, disciplined, but creative mind, determined to master any task he undertook, and willing to make hard decisions. He is generally known as the "father of Air Force missiles and space." United States Air Force, Office of Air Force History. 1903 - 2003 Flight: the 100th Anniversary Commemorative Edition.

Seeds of Hate-Lawrence Pintak 2003-10-20 In the aftermath of 9/11, America has been haunted by one question: why do they hate us? This book is an attempt to answer that question, tracing the roots of the crisis back to American's involvement in the Middle East, and in particular Lebanon. Journalist Lawrence Pintak was a correspondent for CBS in Beirut in the 1980s, where he witnessed the birth of the current 'terror': its tactics were honed there. In Seeds of Hate, he explores how America's flawed policy in the Lebanon transformed Muslim perceptions of the US -- from impartial peacekeeper to hated enemy of the Lebanese Muslims. Seeds of Hate is required reading for anyone who wants a deeper understanding of how and why the relationship between America and the Middle East is now more volatile than ever. Pintak explores the links between those who carried out the terror war in Lebanon and the current wave of terror, examining in-depth the ongoing -- but little publicised -- role played by key figures behind the Beirut bombings. He considers how the template for shaping would-be terrorists is being replicated from Saudi Arabia to Indonesia and speaks with victims of the earlier wave of terror. Pintak also explores the differences between terrorism of al-Qa'ida and its allies, and that of Palestinians on the West Bank.
