Pro/Engineer Wildfire 5.0 Advanced Tutorial-Roger Toogood 2009-12-01 The purpose of Pro/ENGINEER Advanced Tutorial is to introduce users to some of the more advanced features, commands, and functions in Pro/ENGINEER Wildfire 5.0. Each lesson concentrates on a few of the major topics and the text attempts to explain the "why's" of the commands in addition to a concise step-by-step description of new command sequences. This book is suitable for a second course in Pro/ENGINEER for users who understand the features covered in Roger Toogood's Pro/ENGINEER Tutorial. The style and approach of the previous tutorial have been maintained. The material covered in this tutorial represents an overview of what is felt to be commonly used and important functions. These include customization of the working environment, advanced feature creation (sweeps, round sets, draft and tweaks, UDF's, patterns and family tables), layers, Pro/PROGRAM, and advanced drawing and

assembly functions. Pro/ENGINEER Advanced Tutorial consists of eight lessons. A continuing theme throughout the lessons is the creation of parts for a medium-sized modeling project. The project consists of a small three-wheeled utility cart. Project parts are given at the end of each lesson that utilize functions presented earlier in that lesson. Final assembly is performed in the last lesson.

Integrative Document & Content Management-Len Asprey 2003-01-01 Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. Designing Portals: Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.

The contents of each chapter are organized into well-defined sections that contain step-by-step instructions to carry out the AutoCAD commands. The drawings shown in this book are created using AutoCAD 2014 and Paint software. Several improvements are made to the fifth edition. The most important improvement is the usage of the ribbon interface. The major contents of the book are based on the ribbon interface. A new chapter titled as AutoCAD 2014 - Classics Interface is created to introduce the classic interface. The index is improved. The Chapter Suggested In-Class Activities provides in-class activities (or ICA). For some of the initial ICAs, it explains the drawing with the help of step-by-step instructions. Also, new problems are added to the homework chapter. Furthermore, the contents and the drawings of every chapter are improved. Each chapter starts with the chapter objectives followed by the introduction. The bulleted objectives provide a general overview of the material covered.
