Tracking Color in Cinema and Art-Edward Branigan 2017-10-30 Color is one of cinema's most alluring formal systems, building on a range of artistic traditions that orchestrate visual cues to tell stories, stage ideas, and elicit feelings. But what if color is not—or not only—a formal system, but instead a linguistic effect, emerging from the slipstream of our talk and embodiment in a world? This book develops a compelling framework from which to understand the mobility of color in art and mind, where color impressions are seen through, and even governed by, patterns of ordinary language use, schemata, memories, and narrative. Edward Branigan draws on the work of Ludwig Wittgenstein and other philosophers who struggle valiantly with problems of color aesthetics, contemporary theories of film and narrative, and art-historical models of analysis. Examples of a variety of

media, from American pop art to contemporary European cinema, illustrate a theory based on a spectator's present-time tracking of temporal patterns that are firmly entwined with language use and social intelligence.

Thicker Than Water-Melissa Meyer 2014-02-04 Blood is more than a fluid solution of cells, platelets and plasma. It is a symbol for the most basic of human concerns--life, death and family find expression in rituals surrounding everything from menstruation to human sacrifice. Comprehensive in its scope and provocative in its argument, this book examines beliefs and rituals concerning blood in a range of regional and religious contexts throughout human history. Meyer reveals the origins of a wide range of blood rituals, from the earliest surviving human symbolism of fertility and the hunt, to the Jewish bris, and the clitoridectomies given to young girls in parts of Africa. The book also explores how cultural practices influence gene selection and makes a connection with the natural sciences by exploring how color perception influences the human proclivity to create blood symbols and rituals.

Inscrutable Belongings-Stephen Hong Sohn 2018-07-17 *Inscrutable Belongings* brings together formalist and contextual modes of critique to consider narrative strategies that emerge in queer Asian North American literature. Stephen Hong Sohn provides extended readings of fictions involving queer Asian North American storytellers, looking to texts including Russell Leong's "Camouflage," Lydia Kwa's *Pulse*, Alexander Chee's *Edinburgh*, Nina Revoyr's *Wingshooters*, and Noël Alunit's *Letters to Montgomery Clift*. Despite many antagonistic forces, these works' protagonists achieve a revolutionary form of narrative centrality through the defiant act of speaking out, recounting their "survival plots," and enduring to the very last page. These feats are made possible through their construction of alternative social structures Sohn calls "inscrutable belongings." Collectively, the texts that Sohn examines bring to mind foundational struggles for queer Asian North Americans (and other socially marginalized groups) and confront a broad range of issues, including interracial desire, the AIDS/HIV epidemic, transnational mobility, and postcolonial trauma. In these texts, Asian North American queer people are often excluded from normative family structures and must contend with multiple histories of oppression, erasure, and physical violence, involving homophobia, racism, and social death. Sohn's work makes clear that for such writers and their imagined communities, questions of survival, kinship, and narrative development are more than representational—they are directly tied to lived experience.

Thicker Than Blood-Penny Rudolph 2007-08-16 "Rudolph provides a well-crafted plot and satisfying levels of suspense, but what stands out most is Rachel herself—one of the most refreshing new series heroines to wander into the crime genre in quite a while." —Booklist

STARRED review For Rachel Chavez, every day is a battle with her demons. She only wants to stay sober and keep her recently inherited parking lot in downtown LA financially afloat. But it's a nearly 24/7 job. Then an executive from the nearby water agency is killed by a hit-and-run driver and Rachel spots the car that did the deed in her garage. A few days later her stand-in employee dies of peculiar causes. And Rachel unknowingly becomes tangled in the conniving cross-purposes of California water politics. When she uncovers evidence of a crime ring, Rachel believes the mystery of the two deaths is solved. But another official is killed, her own father disappears, and it becomes agonizingly clear that the killer is closing in on Rachel.

The New Colored People-Jon M. Spencer 2000-08-01 Most Americans remain oblivious of a new racial phenomenon that may radically alter the political landscape of the United States. In recent years, dramatic increases in racial intermarriage have given birth to a generation of mixed-race children whose interracially married parents refuse to allow them to be shoehorned into neat, pre-existing racial categories. The parents, through organizations they have founded or joined, have lobbied aggressively for the category "multiracial" to be added to official racial classifications at the state and federal levels, including the United States census. Since a nonracial society is one of the stated goals of the multiracialists, Spencer suggests that the undoing of racial classification will come not

by initiating a new classification - which will only give Americans the impression that mixed-race people can be neatly classified - but by our increased recognition that there are millions of people who simply defy classification.

Thicker Than Blood-Tukufu Zuberi 2001 Tukufu Zuberi offers a concise account of the historical connections between the development of the idea of race and the birth of social statistics. Zuberi describes the ways race-differentiated data is misinterpreted in the social sciences and asks searching questions about the ways racial statistics are used. He argues that statistical analysis can and must be deracialized, and that this deracialization is essential to the goal of achieving social justice for all.

Water Thicker Than Blood-Saundra Terrell 2017-04-10 In *Water Thicker Than Blood*, Terrell tells a story of love, family, sadness, and hurt, but mainly of the challenges we face when trying to forgive ourselves and others. Johnny Mae can never receive the love from the one person she craves, and then there's Pearl, whose midnight complexion and being overweight are a stark contrast to her honey-brown skinned and petite sister with the good hair. Terrell's characters are believable; their flaws, missteps, and insecurities connect with us on an intimate level. We find ourselves rooting for Johnny Mae to fulfill her lifelong dream to become a clothes designer and for Pearl to gain acceptance for who she is, and we ultimately rejoice in the understanding that opportunity and unconditional love may never come by blood--but by water.

Handbook of Research on Deep Learning-Based Image Analysis Under Constrained and Unconstrained Environments-Alex Noel Joseph Raj 2020-11

Recent advancements in imaging techniques and image analysis has broadened the horizons

for their applications in various domains. Image analysis has become an influential technique in medical image analysis, optical character recognition, geology, remote sensing, and more. However, analysis of images under constrained and unconstrained environments require efficient representation of the data and complex models for accurate interpretation and classification of data. Deep learning methods, with their hierarchical/multilayered architecture, allow the systems to learn complex mathematical models to provide improved performance in the required task.

The **Handbook of Research on Deep Learning-Based Image Analysis Under Constrained and Unconstrained Environments** provides a critical examination of the latest advancements, developments, methods, systems, futuristic approaches, and algorithms for image analysis and addresses its challenges. Highlighting concepts, methods, and tools including convolutional neural networks, edge enhancement, image segmentation, machine learning, and image processing, the book is an essential and comprehensive reference work for engineers, academicians, researchers, and students.
