**Metagaming**-Stephanie Boluk 2017-04-04 The greatest trick the videogame industry ever pulled was convincing the world that videogames were games rather than a medium for making metagames. Elegantly defined as “games about games,” metagames implicate a diverse range of practices that stray outside the boundaries and bend the rules: from technical glitches and forbidden strategies to Renaissance painting, algorithmic trading, professional sports, and the War on Terror. In *Metagaming*, Stephanie Boluk and Patrick LeMieux demonstrate how games always extend beyond the screen, and how modders, mappers, streamers, spectators, analysts, and artists are changing the way we play. *Metagaming* uncovers these alternative histories of play by exploring the strange experiences and unexpected effects that emerge in, on, around, and through videogames. Players puzzle through the problems of perspectival rendering in *Portal*, perform clandestine acts of electronic espionage in *EVE Online*, compete and commentate in Korean *StarCraft*, and speedrun *The Legend of Zelda* in record times (with or without the use of vision). Companies like Valve attempt to capture the metagame through international e-sports and online marketplaces while the corporate history of *Super Mario Bros.* is undermined by the endless levels of *Infinite Mario*, the frustrating pranks of *Asshole Mario*, and even *Super Mario Clouds*, a ROM hack exhibited at the Whitney Museum of American Art. One of the only books to include original software alongside each chapter, *Metagaming* transforms videogames from packaged products into instruments, equipment, tools, and toys for intervening in the sensory and political economies of everyday life. And although videogames conflate the creativity, criticality, and craft of play with the act of consumption, we don’t simply play videogames—we make metagames.

**Debugging Game History**-Raiford Guins 2016-06-03 Essays discuss the terminology, etymology, and history of key terms, offering a foundation for critical historical studies of games. Even as the field of game studies has flourished, critical historical studies of games have lagged behind other areas of research. Histories have generally been fact-by-fact chronicles; fundamental terms of game design and development, technology, and play have rarely been examined in the context of their historical, etymological, and conceptual underpinnings. This volume attempts to “debug” the flawed historiography of video games. It offers original essays on key concepts in game studies, arranged as in a lexicon—from “Amusement Arcade” to “Embodiment” and “Game Art” to “Simulation” and “World Building.” Written by scholars and practitioners from a variety of disciplines, including game development, curatorship, media archaeology, cultural studies, and technology studies, the essays offer a series of distinctive critical “takes” on historical topics. The majority of essays look at game history from the outside in; some take deep dives into the histories of play and simulation to provide context for the development of electronic and digital games; others take on such technological components of games as code and audio. Not all essays are history or historical etymology—there is an analysis of game design, and a discussion of intellectual property—but they nonetheless raise questions for historians to consider. Taken together, the essays offer a foundation for the emerging study of game history. Contributors Marcelo Aranda, Brooke Belisle, Caetlin Benson-Allott, Stephanie Boluk, Jennifer deWinter, J. P. **Electric Power Systems**-Ned Mohan 2012-01-18 Author Ned Mohan has been a leader in EES education and research for decades. His three-book series on Power Electronics focuses on three essential topics in the power sequence based on applications relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPERE texts; his systems approach which puts dry technical detail in the context of applications; and substantial pedagogical support including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.

**Adaptive Filter Theory**-Simon S. Haykin 1996 Haykin examines both the mathematical theory behind various linear adaptive filters with finite-duration impulse response (FIR) and the elements of supervised neural networks. This edition has been updated and refined to keep current with the field and develop concepts in as unified and accessible a manner as possible. It: introduces a completely new chapter on Frequency-Domain Adaptive Filters; adds a chapter on Tracking Time-Varying Systems; adds two chapters on Neural Networks; enhances material on RLS algorithms; strengthens linkages to Kalman filter theory to gain a more unified treatment of the standard, square-root and order-recursive forms; and includes new computer experiments using MATLAB software that illustrate the underlying theory and applications of the LMS and RLS algorithms.

**Public Policy Making**-Larry N. Gerston 2015-05-18 This brief text identifies the issues, resources, actors, and institutions involved in public policy making and traces the dynamics of the policymaking process, including the triggering of issue awareness, the emergence of an issue on the public agenda, the formation of a policy commitment, and the implementation process that translates policy into practice. Throughout the text, which has been revised and updated, Gerston brings his analysis to life with abundant examples from the most recent and emblematic cases of public policy making. At the same time, with well-chosen references, he places policy analysis in the context of political science and deftly orients readers to the classics of public policy studies. Each chapter ends with discussion questions and suggestions for further reading.

**Semantic Polarities and Psychopathologies in the Family**-Valeria Ugazio 2013-08-21 The gap between psychotherapeutic practice and clinical theory is ever widening. Therapists still don’t know what role interpersonal relations play in the development of the most common psychopathologies. Valeria Ugazio bridges this gap by examining phobias, obsessive-compulsions, eating disorders, and depression in the context of the family, using an intersubjective approach to personality. Her concept of “semantic polarities” gives a groundbreaking perspective to the construction of meaning in the family and other interpersonal contexts. At no point is theory left in the wasteland of abstraction. The concreteness of the many case studies recounted, and examples taken from well-known novels, will allow readers to immediately connect the topics discussed with their own experience.

**Politics and Religion in Zimbabwe**-Ezra Chitando 2020-05-05 This book illustrates how religion and ideology were used by Robert Mugabe to ward off opposition within his own party, in Zimbabwe and from the West. An interdisciplinary line up of contributors argue that Mugabe used a calculated narrative of deification - presenting himself as a divine figure who had the task of delivering land, freedom and confidence to black people across the world - to remain in power in Zimbabwe. The chapters highlight the appropriation and deployment of religious themes in Mugabe's domestic and international politics, reflect on the contestation around the deification of Mugabe in Zimbabwean politics across different forms of religious expression, including African Traditional Religions and various strands of Christianity and initiate further reflections on the interface between religion and politics in Africa and globally. Politics and Religion in Zimbabwe will be of interest to scholar of religion and politics, Southern Africa and African politics.

**Writers' & Artists' Yearbook 2014- 2013**

**Architecture Oriented Otherwise**-David Leatherbarrow 2012-04-17 So much writing about architecture tends to evaluate it on the basis of its intentions: how closely it corresponds to the artistic will of the designer, the technical skills of the builder, or whether it reflects the spirit of the place and time in which it was built, making it not much more than the willful (or even subconscious) assemblage of objects that result from design and construction techniques. Renowned writer and thinker David Leatherbarrow, in this groundbreaking new book, argues for a richer and more profound, but also simpler, way of thinking about architecture, namely on the basis of how it performs. Not simply how it functions, but how it acts, "its manner of existing in the world," including its effects on the observers and inhabitants of a building as well as on the landscape that situates it. In the process, Leatherbarrow transforms our way of discussing buildings from a passive technical or programmatic assessment to a highly active and engaged examination of the lives and performances, intended and otherwise, of buildings.

**Functional Differential Geometry**-Gerald Jay Sussman 2013-07-05 An explanation of the mathematics needed as a foundation for a deep understanding of general relativity or quantum field theory. Physics is naturally expressed in mathematical language. Students new to the subject must simultaneously learn an idiomatic mathematical language and the content that is expressed in that language. It is as if they were asked to read Les Misérables while struggling with French grammar. This book offers an innovative way to learn the differential geometry needed as a foundation for a deep understanding of general relativity or quantum field theory as taught at the college level. The approach taken by the authors (and used in their classes at MIT for many years) differs from the conventional one in several ways, including an emphasis on the development of the covariant derivative and an avoidance of the use of traditional index notation for tensors in favor of a semantically richer language of vector fields and differential forms. But the biggest single difference is the authors' integration of computer programming into their explanations. By programming a computer to interpret a formula, the student soon learns whether or not a formula is correct. Students are led to improve their program, and as a result improve their understanding.

What Garth doesn't know is that getting to Hain, and the Academy for All Magic, is going to be the easy part. Garth goes into Hain for one reason only; he wants training for his out-of-control magical powers. **Frostbike**-Tom Babin 2014-10-07 The bicycle is fast becoming a ubiquitous form of transportation in cities all over the world, making our urban spaces more efficient, more livable and healthier. But many of those bicycles disappear into basements and garages when the warm months end, parked there by owners fearful of the cold, snow and ice that winter brings. But does it have to be that way? Canadian writer and journalist Tom Babin started questioning this dogma after being stuck in winter commuter traffic one dreary and cold December morning and dreaming about the happiness that bicycle commuting had brought him all summer long. So he did something about it. He pulled on some thermal underwear, dragged his bike down from the rafters of his garage and set out on a mission to answer a simple but beguiling question: is it possible to happily ride a bike in winter? That question took him places he never expected. Over years of trial and error, research and more than his share of snow and ice, he discovered an unknown history of biking for snow and ice, and a new generation designed to make riding in winter safe and fun. He unearthed the world's most bike-friendly winter city and some new approaches to winter cycling from places all over the world. He also looked inward, to discover how the modern world shapes our attitudes toward winter. And perhaps most importantly, he discovered the unique kind of bliss that can only come by pedalling through softly falling snow on a quiet winter night.

**The War on Freedom**-Jim Marrs 2003-01-01 The War On FreedomThe 9/11 ConspiraciesWere the U.S. invasions of Afghanistan and Iraq planned long before the tragedies of September 11, 2001? Why did many WTC survivors mention bombs? Why did normal security measures consistently fail that day? Why has no one in government been fired or even reprimanded for failure to anticipate and prevent the attacks? For that matter, who was truly behind the strikes? Who and where is Osama bin Laden? What connects the bin Laden and Bush families?If the purpose of the perpetrators of 9/11 was to end traditional American freedoms, they may well have succeeded. Laws rushed through a Congress that never had a chance to read them while under a declared state of emergency have curtailed our freedoms.

**The Pistol Poets**-Victor Gischler 2004-02-03 The Edgar-nominated author of Gun Monkeys is back with a thrill-a-minute suspense novel that mixes crime and academia—with hilarious results. Here Victor Gischler draws us into a wild and wicked world, where tenured professors are busy burying bodies, cash-up-front P.I.'s hunt for missing coeds and one desperate street-tough has to decide which he'd rather be: a live poet or a dead criminal. An unlucky grad student just got himself killed in a robbery gone bad. And as lowly drug lieutenant Harold Jenks races with the killer out of the alley, a light goes off in his head: He'll steal the dead kid's identity. Now Jenks, who once lorded it over seven square blocks in East St. Louis, is headed due west. With a .32 in his pocket, a 9mm Glock taped across his back, and a rap sheet nearly as long as Finnegans Wake, he's cruising the halls of academia as Eastern Oklahoma U's newest grad student, looking for action and hoping he can stay one couplet ahead of his violent past. While this new bad boy on campus makes mincemeat of his metaphors, across campus visiting professor Jay Morgan has a more pressing problem: What to do about the dead coed in his bed. The professor's no killer, but try telling that to private eye Deke Stubbs. With the professor on the lam and Stubbs hot on his trail, more trouble blows into town. Now, as St. Louis drug boss Red Zach and his minions converge on Fumbee, Oklahoma, looking for a consignment of missing cocaine, the bullets start flying faster than the zingers at a faculty hate fest. For Morgan and Jenks, now desperate fugitives from poetic justice, survival means learning new skills—and learning fast. Because if they find out they're bottom-of-the-class, that means they're already dead. Featuring the sleaziest, sorriest, and most captivating group of criminal lowlifes, sexed-up academics, poets, and rappers ever to collide in one crime novel, The Pistol Poets speeds deliriously to its electrifying payoff.
