The Jungle Save-Omari Jr. 2009-11 Jungle Love" is about many different animals in the jungle with characterized personalities showing how they react together once they find out the jungle is in danger . I think this is a great book for children because it not only has a good story plot to it but it also teaches them the values of respecting the jungle and all the animals in it .

Vector Calculus-Susan Jane Colley 2012 Normal 0 false false false Vector Calculus, Fourth Edition, uses the language and notation of vectors and matrices to teach multivariable calculus. It is ideal for students with a solid background in single-variable calculus who are capable of thinking in more general terms about the topics in the course. This text is distinguished from others by its readable narrative, numerous figures, thoughtfully selected examples, and carefully crafted exercise sets. Colley includes not only basic and advanced exercises, but also mid-level exercises that form a necessary bridge between the two.

Genetic Algorithms in Molecular Modeling-James Devillers 1996-06-07 Genetic Algorithms in Molecular Modeling is the first book available on the use of genetic algorithms in molecular design. This volume marks the beginning of an ew series of books, Principles in Qsar and Drug Design, which will be an indispensable reference for students and professionals involved in medicinal chemistry, pharmacology, (eco)toxicology, and agrochemistry. Each comprehensive chapter is written by a distinguished researcher in the field. Through its up to the minute content, extensive bibliography, and essential information on software availability, this book leads the reader from the theoretical aspects to the practical applications. It enables the uninitiated reader to apply genetic algorithms for modeling the biological activities and properties of chemicals, and provides the trained scientist with the most up to date information on the topic. . Extremely topical and timely . Sets the foundations for the development of computer-aided tools for solving numerous problems in QSAR and drug design . Written to be accessible without prior direct experience in genetic algorithms

Unexploded Ordnance Detection and Mitigation-James Byrnes 2008-12-19 The chapters in this volume were presented at the July–August 2008 NATO Advanced Study Institute on Unexploded Ordnance Detection and Mitigation. The conference was held at the beautiful Il Ciocco resort near Lucca, in the glorious Tuscany region of northern Italy. For the ninth time we gathered at this idyllic spot to explore and extend the reciprocity between mathematics and engineering. The dynamic interaction between world-renowned scientists from the usually disparate communities of pure mathematicians and applied scientists which occurred at our eight previous ASI's continued at this meeting. The detection and neutralization of unexploded ordnance (UXO) has been of major concern for very many decades; at least since the First World war. UXO continues to be the subject of intensive research in many ?elds of science, incl- ing mathematics, signal processing (mainly radar and sonar) and chemistry. While today's headlines emphasize the mayhem resulting from the placement of imp- vised explosive devices (IEDs), humanitarian landmine clearing continues to draw signi?cant global attention as well. In many countries of the world, landmines threaten the population and hinder reconstruction and fast, ef?cient utilization of large areas of the mined land in the aftermath of military con?icts.

Microsystems Technology for Multimedia Applications-Bing Jay Sheu 1995 Current interest in NAD (Nicotinamide adenine dinucleotide) in biological systems focuses on its role in ADP-ribose transfer reactions. These appear to be fundamentally involved in the regulation of many physiological processes. The contributions in this monograph thus represent the range of research in the very active investigation of niacin metabolism. The major topics covered are:??? - Enzymology of ADP-Ribosylation - ADP-Ribosylation and Chromatin Function - Carcinogenesis and Differentiation - NAD Metabolism and Chemotherapy - ADP-Ribosylation and Signal Transduction - Molecular Genetic Approaches to.

From Far Away-Kyoko Hikawa 2013-04-30 Together for only a short time, Noriko and Izark are beginning to develop romantic feelings for one another. But now, before the spark of passion catches fire, another comrade-in-arms confesses his love for the young schoolgirl. Even in the most dire of situations, love can blossom...twice! -- VIZ Media

The Reception of W. B. Yeats in Europe-Klaus Peter Jochum 2013-02-14 The intellectual and cultural impact of British and Irish writers cannot be assessed without reference to their reception in European countries. These essays, prepared by an international team of scholars, critics and translators, record the ways in which W. B. Yeats has been translated, evaluated and emulated in different national and linguistic areas of continental Europe. There is a remarkable split between the often politicized reception in Eastern European countries but also Spain on the one hand, and the more sober scholarly response in Western Europe on the other. Yeats's Irishness and the pre-eminence of his lyrical work have posed continuous challenges. Three further essays describe the widely divergent reactions to Yeats in his native Ireland, during his lifetime and up to the most recent years.

Handmade in India-Aditi Ranjan 2009 The Indian way of life celebrates products made with the help of simple, indigenous tools by craftspeople from a strong fabric of tradition, aesthetic and artistry. The range of Indian handicrafts is as rich and varied as the country's cultural diversity. A tour of India's craft repertoire, Handmade in India is a guide to the arts that reflects the diversity of the country, its culture and the ways it nurtures creativity and ingenuity. This encyclopedic reference captures the traditions that enrich the day-to-day lives of Indian people, as well as provide a livelihood for generations of craftspeople. Handmade in India explores all aspects of handicrafts-historical, social and cultural influences on crafts; design and craft processes; traditional and new markets; products and tools-revealing a remarkable wealth of knowledge. Handmade in India is the result of extensive field work and research. The authors map out regional craft clusters identified across the country according to the prevailing craft-work patterns. It is closely woven with images to reveal the wide array of crafts in India. Some of these are well known, like the woodwork of Kashmir, blue pottery of Jaipur, embroidery of Lucknow and the bamboo craft of Assam. Other, lesser-known crafts, such as stitched boots from Ladakh and tinsel printing in Ahmedabad, are also described in striking detail. The close study of various crafts enables the reader to discern subtle, sometimes unusual, differences in the same craft practiced by distinct regions or communities-such as tie-resist dyeing, which is called bandhani in Gujarat and Madhya Pradesh, but bandhej in Rajasthan. The first of its kind ever attempted, this beautifully illustrated guide will be a tremendous resource for product and textile designers, artists, architects, interior designers, collectors, development professionals and connoisseurs alike. Handmade in India will also be a useful reference for libraries interested in Indian crafts and culture, and organizations that work with the crafts sector in India.

Postmodern Political Communication-Andrew King 1992 Analyses of political dialog have traditionally concentrated on structure of government or social movements. In its examination of the marginal "fringe" groups struggling to secure power, this volume broadens our conception of political behavior and places new emphasis on the generation and invention of politics. The volume's contributors examine discourse of deviant, oppressed, and powerless groups from the point of view of empowerment; that is, how do such outsider groups engage the center and how are they able to use mass media to gain political power?

Highest Courts and Globalisation-Sam Muller 2010-05-31 Hague Academic Press, a T.M.C. Asser Press imprint Highest national courts were conceived at the pinnacle of the national court hierarchy, with one of their main tasks being the maintenance of a degree of legal coherency within the national legal system. Very often such courts also have the ability to declare national laws in violation of the constitution or international treaties. The interactions within societies and legal systems have consequences on highest national courts, which also increasingly interact with each other.

This book investigates the theoretical and practical implications of these phenomena, offering a unique and unprecedented perspective on the issue of highest courts and globalisation from the world's leading scholars and judges.

Essential IVF-Jonathan van Blerkom 2011-06-28 There is no clearer testament to the importance and efficacy of in vitro fertilization in the treatment of the infertile patient than the fact that over one million babies have been born since its clinical introduction in 1978. The success of this worldwide endeavor has evolved to treat some of the formerly most intractable forms of infertility and requires individuals with different skills and insights whose activities are often compartmentalized into clinical, laboratory and research functions. The intent of Essential IVF is to present current issues in clinical IVF that encompass the varied activities of those engaged in this enterprise. By integrating clinical, basic research and laboratory-related aspects of human reproduction, readers with diverse interests should obtain a more complete understanding of the impact, importance and inter-relatedness of each in the progress of infertility treatment, and an appreciation of whether emerging technologies will or should contribute to this progress in the near future. The topics selected for this volume include research that has begun to explain the origins of differential follicular, gamete, embryo and uterine competence, and specific laboratory procedures and protocols that may have important clinical implications for the generation of developmentally viable embryos. Human embryonic research over the past 25 years has not only confirmed that the developmental potential of each embryo is unique, but more importantly, demonstrated how genetic and nongenetic factors for sperm and oocyte determine embryo competence well before fertilization. Several chapters deal with the origins of normal and compromised gametes and how those with high competence can be identified and isolated for fertilization.

Security Aspects of Uni- and Multimodal Hazmat Transportation Systems-Genserik L. L. Reniers 2013-03-25 Written in a clear language, for use by scholars, managers and decisionmakers, this practical guide to the hot topic is unique in treating the security aspects of hazmat transportation from both uni-modal and multi-modal perspectives. To begin with, each transport mode and its relation to security vulnerability, analyses, figures, and approaches is discussed separately. Secondly, the optimization process of a hazmat supply chain is examined from a holistic, integrated viewpoint. Finally, the book discusses and compares the various hazmat transport security policies and strategies adopted in various regions around the world. The result is a must-have source of high-quality information including many case studies.

The Family in the New Millennium: The place of family in human society-A. Scott Loveless 2007

Nonlinear Dynamics of Nanosystems-Günter Radons 2010-01-12 A discussion of the fundamental changes that occur when dynamical systems from the fields of nonlinear optics, solids, hydrodynamics and biophysics are scaled down to nanosize. The authors are leading scientists in the field and each of their contributions provides a broader introduction to the specific area of research. In so doing, they include both the experimental and theoretical point of view, focusing especially on the effects on the nonlinear dynamical behavior of scaling, stochasticity and quantum mechanics. For everybody working on the synthesis and integration of nanoscopic devices who sooner or later will have to learn how to deal with nonlinear effects.

Cruising-Shane Allison 2012-04-02 Hot flings at a seedy truck stop. Homemade glory holes in the stall walls of a dorm shower. Fun and fornication at an infamous park. Steamy bathhouse trysts and other tales of public eroticism is what Cruising is all about. As Shane Allison says, "This is the anthology I have dreamed of doing for years. There's nothing that gets the adrenaline flowing and the muscle throbbing like public sex." Filled with hot plots and even hotter characters, Cruising doesn't shy away from new erotic territory and includes several true confessions including those of the editor himself. As with all of Allison's sexy compilations, creativity and diversity of story lines are key along with the fun factor that is the hallmark of Allison's anthologies. "One Hot Baby" by Daniel Curzon person is a wryly sweet short about an aging straight guy who stops to pee in a park and gets an unexpected blow job, which lifts his spirits. A fierce black queen enjoys some of "New York's Phynest" in an "arresting" erotic encounter with a hot Dominican cop in Donald Peebles Jr.'s surprise-filled story while the narrator of Rob Rosen's "Small Town Blues" gets horny in the sticks, hits on a young Indian immigrant clerk in the jiffy mart and discovers that the hicks are up for group action anytime and anywhere. Cruising moves at the highest speed and is filled with kink, sex toys, exotic locations, wild scenarios and plenty of sexual intensity.

Rhinologic Diagnosis and Treatment-Thomas Vincent McCaffrey 1997 This volume in the Rhinology and Sinusology series summarizes the relevant treatment considerations for systemic diseases impacting the nasal airway.

Omnipotent Fantasies and the Vulnerable Self-Carolyn S. Ellman 1997 Fantasies of omnipotence grow out of feelings of helplessness. We are all born helpless, completely dependent on others for nurturance and survival, and we all must face the ultimate annihilation of the self at the end of life. While fantasies of omnipotence help us to cope with these painful acts, they may also interfere with our ability to engage reality and deal with life. This important new book addresses all aspects of omnipotence, from the merger fantasies of the baby who feels like an extension of the powerful parent, to the rigid defense omnipotent fantasies of the frightened borderline patient, to the soothing spiritual and religious feelings that help many accept loss and mortality. Contributions by noted authors like Otto Kernberg, Jack and Kerry Kelly Novick, Henry Krystal, Paul Ornstein and Steven Ellman should make this a valuable resource to all clinicians and other students of human behaviour.
