**Essays in Philosophy**-William James 1978 Essays in Philosophy brings together twenty-one essays, reviews, and occasional pieces published by James between 1876 and 1910. They range in subject from a concern with the teaching of philosophy and appraisals of philosophers to analyses of important problems. Several of the essays, like "The Sentiment of Rationality" and "The Knowing of Things Together," are of particular significance in the development of the views of James's later works. All of them, as John McDermott says in his Introduction, are in a style that is "engaging and personal...witty, acerbic, compassionate, and polemical." Whether he is writing an article for the Nation of a definition of "Experience" for Baldwin's Dictionary or "The Mad Absolute" for the Journal of Philosophy, James is always unmistakably himself, and always readable.

**Peter Stent, London Printseller**-Alexander V. Globe 2011-11-01 From the 15th century on, engravings influenced European culture almost as profoundly as books. Like stained glass windows in the Middle Ages or television today, popular prints were designed to reach even the lowest orders of society. In the 17th century, Peter Stent, whose shop stood outside Newgate, was England's most prolific seller of popular prints, maps, and copybooks to the working and rising middle classes. His inventory of copper plates reflected the shifts of popular tastes during this period and commented directly on the turbulent events of the day. In documenting Stent's output, Alexander Globe studied the printsellers' advertising catalogues as external controls for reconstructing inventories as well as indices to contemporary tastes. From these and other contemporary sources, Globe cites every engraving and book attributable to Stent, breaking down the material into types: portraits, maps, miscellaneous sheets, and books (including works on handwriting, politics, natural history, anatomy, costume, and architecture). References and additions are made to the catalogues of Donald Wing and A.M. Hind. Globe takes the history of engraving beyond Hind by including prints from the Commonwealth, Protectorate, and early Restoration periods. Eight appendices supplement the catalogue information. They provide evidence for print identification, discuss paper sizes, and list Stent's artists, suppliers, and business associates. All the collectiions in which Stent items may be found are named. The volume concludes with a bibliography and indices of subject as well as post-17th century authors. Globe's introduction to Stent's work is concerned with the social, political, and economic conditions leading to the emergence of a popular printseller who catered to a different clientele from that usually studied by art historians. Stent's career illustrates the mid-17th century commercial revolution which saw the artisan's customers change from the wealthy leisure class to the worker who wanted mass-produced cheap goods. Drawing on material in a hundred libraries and museums around the world, the catalogue describes over fifteen hundred engravings, including 319 sheets and five books of portraits, 42 maps, 102 miscellaneous prints and sets (with religious, classical, heeraldic, and satirical subjects), and 86 books (on handwriting, politics, military training, natural history, figure sketches, costume, architecture, and ornament). Richly illustrated with 319 plates, Peter Stent will prove valuable not only to print dealers, art historians, museums, and libraries, but also to social, cultural, and political historians.

**Sheet Metal Forming Optimization**-Ganesh M. Kakandikar 2017-10-16 Automotive and aerospace components, utensils, and many other products are manufactured by a forming/drawing process on press machines of very thin sheet metal, 0.8 to 1.2 mm. It is imperative to study the effect of all involved parameters on output of this type of manufacturing process. This book offers the readers with application and suitability of various evolutionary, swarm, and bio-inspired optimization algorithms for sheet metal forming processes. Book initiates by presenting basics of metal forming, formability followed by discussion of process parameters in detail, prominent modes of failure, basics of optimization and various bioinspired approaches followed by optimization studies on various industrial components applying bioinspired optimization algorithms. Key Features: • Focus on description of basic investigation of metal forming, as well as evolutionary optimization • Presentation of innovative optimization methodologies to close the gap between those formulations and industrial problems, aimed at industrial professionals • Includes mathematical modeling of drawing/forming process • Discusses key performance parameters, such as Thinning, Fracture, and Wrinkling • Includes both numerical and experimental analysis
