Web-Based Education-Anil Aggarwal 2003-01-01 "A range of investigative, problem-solving articles pertaining to current developments in educational systems, this collection draws from faculty experiences gained while implementing and utilizing a combination of telecommunications and web-enabled technologies. Addressing trends and issues, and exploring the opportunities and problems confronting colleges and universities related to this relatively new practice, the articles present numerous academic perspectives and

provide concepts for effectively utilizing and managing web-based education in a teaching environment. Proving recognizable competition to traditional university education, many public and private colleges and universities are facing the challenges and opportunities offered by this new technology-based concept. Discussing the successes and failures of the early adopters and including issues relating to peer-to-peer networks, e-course management, and MIS needs, this book attempts to move from questions concerning "what" to issues relating to "how."

Human - Computer Systems Interaction: Backgrounds and Applications 2-Zdzisław S. Hippe 2011-11-15 This volume of the book contains a collection of chapters selected from the papers which originally (in shortened form) have been presented at the 3rd International Conference on Human-Systems Interaction held in Rzeszow, Poland, in 2010. The chapters are divided into five sections concerning: IV. Environment monitoring and robotic systems, V. Diagnostic systems, VI. Educational Systems, and VII. General Problems. The novel concepts and realizations of humanoid robots, talking robots and orthopedic surgical robots, as well as those of direct brain-computer interface are examples of particularly interesting topics presented in Sec. VI. In Sec. V the problems of skin cancer recognition, colonoscopy diagnosis, and brain strokes diagnosis as well as more general problems of ontology design for medical diagnostic knowledge are presented. Example of an industrial diagnostic system and a concept of new algorithm for edges detection in computer-analyzed images are also presented in this Section. Among the educational systems, in Sec. VII the remote teaching and testing methods in higher education, a neurophysiological approach to aiding the learning process, an entrepreneurship education system and a magnetic levitation laboratory systems are presented. Sec. VII contains papers devoted to selected general human-computer systems interaction problems. Among them the problems of rules formulation for automatic reasoning, creation of ontologies, Boolean recommenders in decision systems and languages for proteins structural similarity description can be mentioned. The chapters included into both, I and II volumes of the book illustrate a large variety of problems arising and methods used in the rapidly developing Human-System Interaction research domain.

Pivoting Your Instruction-Bruce M. Mackh 2021-08-24 This practical guide for college and university instructors explains how to design and prepare your courses to be adaptable for a full range of learning environments—whether that’s online, hybrid, or face-to-face traditional campus teaching. Author Bruce M. Mackh unpacks a comprehensive instructional design approach to curriculum and instruction that is suitable for all modalities and allows you to pivot quickly, regardless of how the course will be delivered. Chapters provide quick takeaways and cover challenges and opportunities, adapting high-impact practices across instructional models and fostering a culture of care. The book also encourages faculty members to adopt a student-centered mindset as they employ the principles of Design Thinking, User Experience Design, Instructional Design, and Learning Experience Design to create a high-quality course. The strategies at the heart of this book will help both new and experienced faculty save time, ensure instructional continuity during transitions, and achieve excellence in teaching.

Problem Questions for Law Students-Geraint Brown 2021-09-28 Law students rarely have experience answering problem questions before university, and lecturers concentrate on teaching content rather than the exam skills needed. This book bridges the gap on how to transpose knowledge and research into structured and coherent answers to problem questions while earning a law degree. Aimed at undergraduates, international students, and foundation and SQE candidates, the book gives a step-by-step study guide on how to navigate what a problem question is asking you to do. It deconstructs the process using examples from a range of different fields of law, providing essential guidance from research and critical thinking to style and tone. Including a range of examples to test yourself against, this is an indispensable resource for any law student who wants to tackle problem questions with confidence.

Advances in Information Systems Development-Gabor Magyar 2007-08-28 This monograph details the proceedings of the 15th International Conference on Information Systems Development. ISD is progressing rapidly, continually creating new challenges for the professionals involved. New concepts, approaches and techniques of systems development emerge constantly in this field.
